

LB、LK 立式斜流泵

Vertical Mixed Flow Pump

产品概述

LK、LB 型立式斜流泵是一种大流量低扬程产品，适用于电厂、钢厂、自来水公司、污水处理厂、石油化工、矿山等工矿企业，以及市政给排水工程、农业灌溉、防洪排涝等工程。可以用来输送 55℃以下的清水、雨水、铁皮坑水、污水以及海水等介质，流量范围 600-70000m³/h，扬程范围 4-70m。特殊设计的输送介质温度可达 150℃。符合我公司参与起草的国家标准 JB/T10812-2007《立式斜流泵》，具有循环润滑轴承装置专利（专利号 200620050566.6）、一种套筒联轴器（专利号 201320103729.2）、一种海水泵自润滑系统（专利号 201320609038.X）等十几种专利。

Application:

LB / LK mixed flow pump is a pump with large flow and low head. It is applicable to projects of petrochemical industry, offshore platform, LNG station, electric power plant, steel plant, water supply plant, sewage treatment plant, mines and other industrial companies as well as drainage, irrigation, flood control and drainage works. It can pump clean water, rain water, seawater, clear water, iron scale pit water, sewage and other liquid below 55°C whose flow ranges in 600-70000m³/h and head ranges in 4-70m. With special design, it is able to pump liquid of temperature up to 150°C. It follows the national standard JB/T10812-2007 Vertical Mixed Flow Pump (Nep is one of the drafters of this standard) and has won a dozen of patents, including circulating lube bearing device (patent No. 200620050566.6), a type of sleeve coupling (patent No. 201320103729.2), a self-lubrication system for seawater pump (patent No. 201320609038.X).

产品特点

1. 运行平稳，安全可靠，免抽真空启动，使用寿命周期长。
2. 泵体积小，基础占地面积少，基础以下泵长度可以调整，适应性强。
3. 流道简单可靠，节省泵房基建投资。
4. 结构合理，装卸方便，维护检修容易简便。
5. 泵效率高，降低运行成本。
6. 标准化程度高，零部件通用互换性强。

Features

1. Operation smooth, safe and reliable, starting without vacuumizing, service life long.
2. The volume of the pump small, less occupied land area, saving the investment for construction of the pump house.
3. The pump length under foundation is adjustable with good applicability.
4. Structure reasonable, convenient for mounting and dismantling, easy to maintain and inspect.
5. Flowing channel simple and reliable, Efficiency high, operating cost reduced.
6. Higher standardization, and better interchangeability of components.

first time design)

5. 泵口径在 1000mm 以下时，泵转子一般为不可抽形式；泵轴向水推力及转子重量一般由泵本体推力轴承承受，泵和电机之间采用弹性联接；泵吐出口位于安装面基础之上（型式代号为 ST 的结构形式）。如有要求，也可以由电机承受轴向水推力及转子重量；或其它结构形式的组合（型式代号为 SD、XT、XD）；用户如有要求，也可以设计成可抽式结构形式。泵口径在 1000mm 以上时，泵转子一般为可抽形式；泵轴向水推力及转子重量一般由电机推力轴承承受，泵和电机之间采用刚性联接；泵吐出口位于安装面基础之下（型式代号为 XD）。如有要求，也可以由泵承受轴向水推力及转子重量；或其它结构形式的组合（型式代号为 XT、SD、ST）。用户如有要求，也可以设计成不可抽式结构形式。

6. 泵本体承受轴向水推力及转子重量时，泵采用专利产品循环润滑轴承装置，除具有透气、防水、测温(PT100)、加油、油位显示及冷却等功能外，还具有油位自动循环的淋浴润滑功能。可达到在环境温度为 40℃ 时，轴承的指示温度不超过 65℃，润滑效果好，轴承发热少，使用寿命长。

7. 泵轴向密封采用填料密封。

8. 主轴联接采用哈夫联轴器或套筒联轴器，具有可靠性高，结构简单，对接容易、拆装方便，定位准确可靠。

9. 在泵安装基础上可以进行叶轮与叶轮室（转动部分与静止部分）之间间隙的调整，操作方便。

10. 从吐出方向往泵看，电机接线盒与泵外接润滑水管位于左侧。也可根据用户要求，布置在其它方位。

Structure feature:

1. Series LK, LB pumps are of vertical single stage and/or multistage centrifugal or mixed flow with diffuser types.

2. The following structure types are available for the pump: the discharge opening above and/or under the mounting foundation (Type Code named S and X respectively); the axial thrust force born by the pump and/or by the motor (Type Code named T and D); lubricating water from outside and/or from the pump itself.

3. The intake sump is of wet pit and/or dry pit types.

Wet pit type: lower part of the pump inundated in the intake sump.

Dry pit type: the water enters into the pump, the suction bell-mouth is connected with the inlet pipe of the pump by means of elbow bend pipe of 90°.

4. Rubber ,Teflon, Thordon guide bearings are selectable for bearings of the pump.

5. Generally when the nozzle diameter of the pump is under 1000mm, non pull-out type is adopted for the rotor and the discharge opening is above the mounting foundation (Type Code named ST). In this case the axial thrust force and the weight of the rotor are usually born by thrust bearings of the pump.

itself and flexible connection is adopted between the pump and the motor. The thrust force and the weight of the rotor can also be born by the motor if required, or other structure types such as SD, XT, XD are available. Rotor pull-out type can also be adopted if required by clients.

Generally when the discharge diameter of the pump is above 1000mm, pull-out type is adopted for the rotor and the discharge opening is under the mounting foundation (Type Code named XD). In this case the axial thrust force and the weight of the rotor are usually born by thrust bearings of the motor and rigid connection is adopted between the pump and the motor. The axial thrust force and the weight of the rotor can also be born by the pump if required, or other structure types such as XT, SD, ST are available. Rotor non pull-out type can also be adopted if required by clients.

6. When the axial thrust force and the weight of the rotor are born by pump itself, the thrust bearing of the pump is lubricated with dilute oil and is equipped with a temperature detector Pt100 to detect bearing temperature and a pressure type thermometer to detect the temperature of lubricating oil. The anti-electrochemical corrosion appliance is adopted for the part of the pump contacting the liquid to ensure the service life of the pump when seawater is pumped.
7. The packing seal is adopted for the axial seal of the pump.
8. Main shaft connection adopts half coupling or sleeve coupling, which has advantages of high reliability, simple structure, easy docking, convenient assembly and disassembly, accurate and reliable positioning.
9. The gap between the impeller and impeller chamber (rotating part and static part) can be adjusted on pump installation foundation, which is convenient for operation.
10. The motor terminal box and pump external lubricating water pipe are lied on left when viewed from outlet to pump. It also can be installed in any other direction base on guest of demand.

注：吐出口径大于等于1000mm时，吐出法兰压力等级均为0.6Mpa。

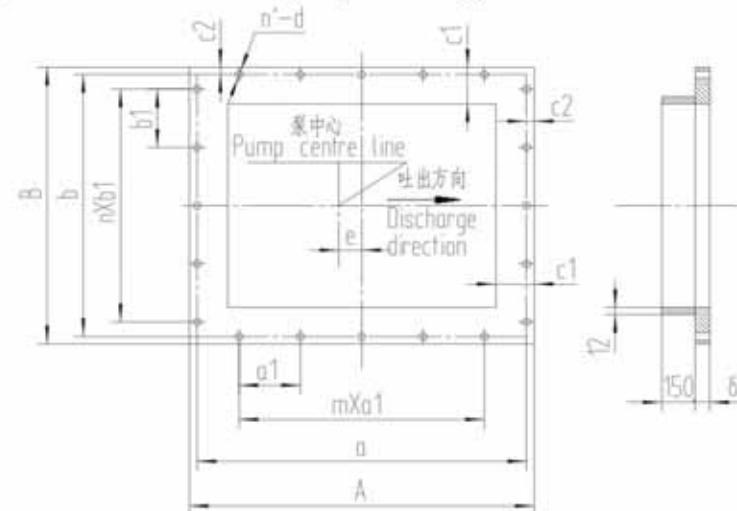

根据具体工程项目需要，泵外形尺寸允许变动。

Remarks: The pressure class for outlet flanges is 0.6Mpa when the nozzle sizes are larger or equal to 1000mm.

The overall dimensions of the pump are allowed to be changed acc. to the requirements of specific projects.

泵推荐吸水流道尺寸图

The pump recommend suction mater runner size drawing

尺寸代号 size code	C	B	Y	W	A	L	H	E	F
尺寸比例 size ratio	0.4D	0.75D	3.5D	2D	6D	1.75D	0.7D	0.3D	0.7D

上图为泵两侧有隔墙的流道图，如无隔墙，则相关尺寸参考下表（此时W为两泵间的最小间距）

Above drawing is the runner drawing for the pump that owns party wall at double side ,check the following table if it haven't party wall (the "W" is the min-distance between two pumps)
